BASIC DESIGN INFORMATION

CODES

Jurisdictions served by Pikes Peak Regional Building Code have adopted the following codes:

- 2023 Pikes Peak Regional Building Code (PPRBC)
- 2021 International Building Code (IBC)
- 2021 International Existing Building Code (IEBC)
- 2021 International Energy Conservation Code (IECC)
- 2021 International Mechanical Code (IMC)
- 2021 International Fuel Gas Code (IFGC)
- 2021 International Swimming Pool and Spa Code (ISPSC)
- 2018 International Plumbing Code (IPC)
- 2020 National Electrical Code (NEC)
- 2017 ICC/ANSI A117.1 Accessibility Standard

The International Fire Code and amendments are adopted by the Fire authority. Plans are reviewed for compliance by the Zoning and Fire authorities. Contact those agencies directly for plan submittal requirements (see page 7).

The following criteria must be included on submittal documents:

SNOW LOADS

Grade Plane - Average elevation of finished ground level adjacent to the building at exterior walls.

Flat Roof Snow Load - Structure shall be designed for the specified uniform snow load, and need not act concurrently with unbalanced loading and drifting. Load may be reduced for slope per ASCE 7-16, however, no other reductions are permitted.

Unbalanced Roof Snow Load - Structure shall be designed for unbalanced loading per ASCE 7-16, Section 7.6, where applicable. Balanced and unbalanced loads shall be analyzed separately. Winds from all directions shall be accounted for when establishing unbalanced loads.

Design factors

\[
\text{Exposure Factor } C_e : 1.0 \\
\text{Thermal Factor } C_t : 1.0 \\
\text{Importance Factor } I : 1.0
\]

Minimum based on Occupancy Category per Table 1604.5

WIND LOADS

Basic wind speed

\[
\begin{align*}
\text{Category I/Ii:} & \quad 130 \text{ mph} (V_{ul}) \\
\text{Category III:} & \quad 135 \text{ mph} (V_{ul}) \\
\text{Category IV:} & \quad 140 \text{ mph} (V_{ul}) \\
\text{Exposure category:} & \quad \text{Exposure C required}
\end{align*}
\]

EARTHQUAKE LOADS - Code sets spectral response factors and cannot be numerically less than the specified values.

Short period spectral response \(S_s : 18.5\%\)
1-Second spectral response \(S_1 : 5.9\%\)

LIVE & DEAD LOADS - Refer to Code
