Re: Gordy Crawford Family Archives
United States Olympic Committee

Dear Mr. Friesen:

This letter has been requested regarding the conformance of the construction with the structural drawings.

Personnel from our office visited the site at intervals appropriate to various stages of the renovation. The purpose of these visits was to confirm that the structural elements were being constructed in general conformance with the contract documents. Periodic site visits were made during the construction period from July 2, 2014 through July 29, 2014, and the elements observed consisted of portions of the structural steel framing. Field observation reports indicating the specific items observed during our visits were provided.

We were not present at the site on a full-time basis. However, to the best of our knowledge, based on our field observations and conversations with the general contractor, we believe the structural elements of this building were constructed in accordance with the contract documents and/or with approved modifications allowed during construction. We believe any outstanding items which had been discussed in our conversations with the general contractor were corrected and completed in a timely manner prior to being covered with other construction and finish materials.

If you have any questions concerning our observations during the construction phase, please contact our office.

Sincerely,

HCDA Engineering, Inc.

Steve A. Horner, P.E.
